SHAN WESLEY BACHAIN

Angono, Rizal, Philippines | 0976 265 2310 | bachainshanwesleyb@gmail.com
GitHub: github.com/shanxwesley | Open to Internships & Collaborations

PROFESSIONAL SUMMARY

Fourth-year Computer Engineering student and Top Performing Student with hands-on experience building AI-integrated web applications and embedded systems. Proven ability to deliver working products from concept to deployment, including a contest-winning interview preparation platform and an AI-powered political transparency tool. Strong foundation in full-stack development, databases, IoT, and AI prompting. Seeking internship opportunities in software development, AI applications, or embedded systems.

EDUCATION

Bachelor of Science in Computer Engineering | University of Rizal System – Antipolo Campus
Expected Graduation: 2027 | *Top Performing Student, College of Engineering*
Relevant Coursework: Programming, Data Structures, Embedded Systems, Database Management, Software Engineering

Senior High School (STEM) | Sumulong College of Arts and Sciences
2021 – 2023 | *Valedictorian, With Highest Honors*

PROJECTS

JobInterviewPro | Backend Developer
AI-assisted web application that helps users practice job interviews and prepare for employment.
- Integrated Groq API for real-time AI-powered interview coaching and feedback
- Designed and implemented backend services using Firebase and MySQL for user data and session management
- Winner of the 2025 System-Making Contest
- Technologies: JavaScript, HTML, CSS, Groq API, Firebase, MySQL

PolitiScan PH | Web Developer
AI-powered political transparency platform focused on Philippine politics.
- Built AI-assisted fact-checking, speech analysis, campaign promise tracking, and politician comparison features
- Deployed as a fully functional web application using GitHub Pages
- Technologies: HTML, CSS, JavaScript, Groq API (Llama 3)

Eco-Smart Station (RainErgy) | Thesis – Team Project
ESP32-based prototype for rainwater harvesting, multi-stage filtration, hybrid solar and microturbine power generation, and coin-operated water and device charging access.
- Developed hardware-software integration using ESP32 for water-level monitoring and automated chlorine dosing
- Evaluated by 10 experts and 136 end-users; rated Very Much Acceptable (grand means 4.64 and 4.72)
- Submitted for patent or utility model registration
- Technologies: ESP32, IoT, Renewable Energy Systems, ADDIE methodology

TECHNICAL SKILLS

Programming & Web: Python, PHP, JavaScript, HTML, CSS
Databases & Backend: MySQL, NoSQL, Firebase
AI Integration: Groq API, Llama models, AI Prompt Engineering
Hardware & Embedded: Arduino, ESP32, Sensors, IoT Systems
Tools & Workflow: GitHub, VS Code, GitHub Pages, Version Control

ACHIEVEMENTS & HONORS

- System-Making Contest Winner (JobInterviewPro) — 2025
- SM Foundation Scholar — 2023 to 2027
- Top Performing Student, College of Engineering — University of Rizal System
- Senior High School Valedictorian, With Highest Honors — 2023
- Third Place, Provincial Statistics Quiz Bee — 2023
- BRITE Program Research Seminar Participant — University of Rizal System, 2025
- Junior High School Valedictorian, With Honors — 2021
